4 minutes

Tailwind Traders wants to reduce storage costs by reducing duplicate content and migrating it to the cloud, when possible. The company is interested in a solution that centralizes maintenance while providing nation-wide access for customers. Customers should be able to browse and purchase items online even an entire Azure region goes offline. Here are some specific requirements:

- **Warranty document retention.** The Compliance and Legal teams require warranty documents be kept for three years.
- **New photos and videos.** Each product has an accompanying photo or video to demonstrate the product.
- **External vendor development.** A vendor creates and develops some of the online e-commerce features. The developer needs access to the HTML files, but only during the development phase.
- **Product catalog updates.** The product catalog is updated every few months. Older versions of the catalog aren't viewed frequently, but they must be available immediately, if accessed.

Answer the following questions

Choose the best response for each of the questions below. Then select **Check your answers**.

1. What's the best way for Tailwind Traders to protect their warranty information? *

☐ Legal hold policy

☒ Time-based retention policy

✓ **Correct.** With a time-based retention policy, users can set policies to store data for a specified interval. When a time-based retention policy is in place, objects can be created and read, but not modified or deleted.

☐ Private endpoint for storage account

2. Which storage option should Tailwind Traders use for their photos and videos? *

☒ Blob Storage

✓ **Correct.** Blob Storage is best for storing photos.

☐ Azure Files

☐ Disk storage

3. How can you provide your developers with access to the business e-commerce HTML files? *

☐ Enable secure transfer

☐ Enable firewall policies and rules

☒ Shared access signatures

✓ **Correct.** Shared access signatures (SAS) provide secure delegated access. This functionality can be used to define permissions, and how long access is allowed.

4. Which access tier should be used for the older versions of the product catalog? *

☐ Hot access tier

☒ Cool access tier

✓ **Correct.** The Cool access tier is for content that isn't viewed frequently, but must be available immediately, if

accessed.

Archive access tier
