

Cleaning up

CAUTION

Make sure you have run the respective clean up instructions for the mechanism you used to provision the lab EKS cluster before proceeding.

- [eksctl](#)
- [Terraform](#)

This section outlines how to clean up the Cloud9 IDE we've used to run the labs.

Similar to how we created the Cloud9 instance, start by opening CloudShell:

<https://console.aws.amazon.com/cloudshell/home>

Then run the following command to delete the CloudFormation stack:

```
~$aws cloudformation delete-stack --stack-name eks-workshop-ide
```
